

# Contrarius Global Equity Fund

The Fund aims to earn a higher Total Rate of Return than the average of the world's equity markets, as represented by the MSCI World Index with net dividends reinvested, expressed in AU\$ ("MSCI World Index"). It aims to achieve this without greater risk of loss, over the long-term. The Fund is an actively managed fund, and as such does not in any way seek to replicate its benchmark index, but may instead differ materially from the performance benchmark in order to achieve its objective.

## Performance of a AU\$10,000 investment<sup>†</sup>, net of fees, distributions reinvested

<sup>†</sup> The returns from 1 January 2009 until 30 June 2018 are illustrative and based on the performance history of the Contrarius Global Equity Fund (Ireland) after applying the Fund's Retail Class fee structure. The returns for the Fund from 1 July 2018 are actual returns. Please refer to the Illustrative Returns section of the Notices page for more information. Past performance is not a reliable indicator of future performance.

## Notes to help you understand this Fact Sheet

Certain capitalised terms are defined in the Important Notices section of the Fund's Reference Guide, copies of which are available on our website ([www.contrarius.com.au](http://www.contrarius.com.au)).

- Returns are net of fees, include income and assume reinvestment of dividends/distributions. Annualised returns show the average amount earned on an investment in the Fee Class each year over the given time period. The country and currency classification for equity securities follows that of third party benchmark providers for comparability purposes. Based on a number of factors including the location of the underlying business, Contrarius may consider a security's classification to be different and manage the Funds' exposures accordingly. Totals presented in this Fact Sheet may not sum due to rounding.
- *Largest drawdown* is defined as the maximum percentage decline over any period, calculated on the total return of the Fund, based on the dealing frequency of the Fund. *Months to recovery* relates to the largest drawdown period and measures the number of months from the preceding peak in performance to the recovery of that level of performance, based on the dealing frequency of the Fund. All other risk measures are calculated using monthly performance since inception. *Annualised monthly volatility* is the standard deviation of the Fund's monthly return, and provides a measure of how much an investment's return varies from its average over time. *Beta vs benchmark* provides an indication of how the Fund's returns move in relation to changes in the benchmark's returns. It indicates how sensitive the Fund is to movements in the market. *Tracking error vs benchmark* measures the volatility of the difference between the returns of a fund and the benchmark, where larger tracking errors indicates the fund's return has historically deviated from the benchmark.
- *Active share* is a measure of how actively managed the Fund is. It is calculated by summing the absolute value of the differences of the weight of each individual stock in the Fund, versus the weight of each holding in the MSCI World Index (the benchmark), and dividing by two.
- *Indirect Cost Ratio (ICR)* is a measure of the actual fees and expenses incurred by the Fee Class over a 12 month period. The expenses are expressed as a percentage of the average daily value of the Fee Class during that period in order to determine the ICR. Fee Class performance is shown after taking into account costs in the ICR. Amounts may vary and the current ICR should not be used as an indication of future fees and expenses. See Product Disclosure Statement for more information about fees and expenses that the Fee Class may incur.
